

Washington State drinking water regulations, WAC 246-290-490, require public water systems to implement a cross connection control program. Cross-connection control programs help protect public health by preventing contamination of the drinking water as it is delivered to water system customers.

As part of our efforts to keep your drinking water safe, we are conducting a cross-connection control hazard survey of residential customers served by our system. The purpose of the survey is to help us determine if any of our residential customers have special plumbing or activities on their premises that could increase the risk of contamination to our water system.

Please complete questionnaire below and check the applicable boxes on the table. Return the completed, signed questionnaire with your payment or directly to Lake Meridian Water District, 27224 144th Ave SE, Kent, WA 98042.

Thanks in advance for filling out the questionnaire. We appreciate your cooperation in helping us to protect your drinking water. If you have questions please contact us at (253) 631-3770 or at customerservice@lakemeridianwater.com.
